

Airfield Cable & Accessory Catalogue

NORTH EUROPE

Linking the future

As the worldwide leader in the cable industry, Prysmian Group believes in the effective, efficient and sustainable supply of energy and information as a primary driver in the development of communities.

With this in mind, we provide major global organisations in many industries with best-in-class cable solutions, based on state-of-the-art technology.

Through two renowned commercial brands - Prysmian and Draka - based in almost 50 countries, we're constantly close to our customers, enabling them to further develop the world's energy and telecoms infrastructures and achieve sustainable and profitable growth.

For our energy business, we design, produce, distribute and install cables and systems for the transmission and distribution of power at low, medium, high and extra-high voltage.

For telecoms, the Group is a leading manufacturer of all types of copper and fibre cables, systems and accessories for voice, video and data transmission.

Drawing on over 130 years' experience and continuously investing in R&D, we apply excellence, understanding and integrity to everything we do, meeting and exceeding the needs of our customers across all continents - while at the same time shaping the evolution of our industry.

Linking global expertise to the wheels of industry

On every continent, in applications that range from air and rail transport infrastructure to heavy duty industries such as mining, tunnel drilling and defence, Prysmian's specialist cable solutions sit at the heart of significant international projects; supporting the work of major customers, with high-performing, durable and safe technology.

As the world leader in cabling, we draw on global expertise and local presence to work in close

proximity with our customers, delivering products and service platforms, built on easy contact, customized solutions and effective supply chains, meeting their specialized requirements, to help them drive the wheels of industry and achieve sustainable growth and profitability. As the worldwide leader in the cable industry, Prysmian Group believes in the effective, efficient and sustainable supply of energy and information as a primary driver in the development of communities.

Airfield lighting cables

With multiple aircraft takeoffs and landings every minute, lighting systems play a vital part in ensuring the safety of pilots, crew, passengers and cargo alike. Prysmian's cables and accessories ensure the continuous operation of these lighting systems, across airport runways, taxiways, buildings and towers and other obstacles. Including connectors and terminations for medium-voltage and transformer circuits, Prysmian Group airport cables ensure airport safety worldwide.

Prysmian Group offers a comprehensive, cutting-edge and continually evolving airfield lighting cable product portfolio that caters for today's ever-increasing and diverse market demands. Anticipating changing trends and requirements, and working in constant proximity with our customers, we're positioned to provide constant progress in keeping the wheels of industry turning around the world.

Ground power supply cables

Prysmian 400 Hz ground power supply cables are specially designed for the power supply of aircrafts, computer systems and radar stations - and comprise both static cables in buildings as well as flexible connections between aircrafts, passenger bridges, hangers and buildings.

The 400 Hz ground power supply cables provide the best design with the maximum number of options and provides great versatility for the aircraft of today and for the future aircraft requirements.

We cater for a broad range of requirements, with cables types to reflect the applications in which they are employed. For standard range cable types we provide resistance to severe mechanical, electrical and chemical, temperature and radioactive constraints.

This is based on our long history and unparalleled know-how and experience with flexible cable materials for demanding handling and environmental applications, for niche industries ranging from mining and crane to wind turbines, rolling stock and even subsea cables.

All of our products are produced with dimension and weight reduction in mind and we adapt to suit the needs of each customer. Our excellence in quality and on-time delivery is recognized and appreciated by all our customers, to whom we deliver worldwide.

Emergency stop systems

Prysmian Group emergency stop system called PressLine is a unique system that offers continuous emergency stop protection around complex industrial hazards. The system is used in many applications throughout the world. It has proven particularly successful for conveyor system in Airport Baggage Control. The actuating device is patented pressure sensitive cable that can follow any route up to 10 km. Activations is by pressing, bedding or pulling the cable at any point along its length. The PressLine control unit monitors the pressure sensitive cable and employs rigorously tested solid state technology.

The control unit continuously monitors the cable and confirms system functionality. If an activation state is detected in the cable, the control unit interacts with machinery controls to switch off plant or activate alarms.

With origins stretching back over 100 years, Prysmian has developed an enviable reputation for product quality and innovative design. Prysmian Components manufacturers and supplies to accredited Business Management System BS EN ISO9001, BS EN ISO14001 and is certified for OHSAS18001.

Airfield Cable & Accessory

Cables for any application

Cables for
field transformer

Cables for airfield
primary lighting
circuits

Cables for
aircraft ground
power

Cables for
temporary power
distribution

As the leading worldwide supplier, Prysmian Group offers an extensive range of cabling solutions for different airport applications.

Typical cable applications for airports include:

Primary Airfield Lighting Circuits

- LV screened cables
- MV screened cables for dry or wet conditions
- MV FAA approved connectors and joints

Secondary Airfield Lighting Circuits

- LV flexible and flame retardant rubber cables
- LV FAA approved connectors

Field Transformer

- FAA approved isolated 50 Hz and 60 Hz transformers
- Field transformers with or without earthing protection

Temporary Power Distribution

- LV flexible and durable rubber cables

Aircraft Ground Power

- 400 Hz ground power cables for static or mobile application
- 1 + 6 core single sheath aviation cable or triplex design
- 400 Hz cable connecting assemblies

Emergency Stop Systems

- PRESSLINE - pressure sensitive cable system

Airfield Cable & Accessory

Explanation of symbols

Conductor temperature

Max. conductor temperature °C in continuous operation.

Flexible installation

Due to IEC 60228 class 5 multi-stranded conductor.

Smoke density

Smoke propagation acc. to EN/IEC 61034.

Halogen free

Halogen free acc. to EN/IEC 60754-1 and EN/IEC 50267-1.

Acidity

Corrosivity acc. to EN/IEC 60754-2.

Fire retardant

Flame propagation acc. to EN/IEC 60332-1.
Bundled and vertical acc. to EN/IEC 60332-3.

Screened or armoured

With either copper, aluminum or steel wire, foil and tape.

Oil resistant

Acc. to DIN EN 60811-404

Fire resistant

Fire resistant acc. to EN/IEC 60331-1 & 2.

UV resistant

Filling and or outer sheath suitable for outdoor application.

EMC

Fulfills EMC-directive with 100% dense screen with low coupling impedance.

Impact resistant

Against shocks.

Pull resistant

High tensile stress required to create cable failure.

Weather proof

Watertight or proof

Axial and radial water blocking via water swellable tape or yarn.

MUD resistant

Resistance to chemicals in drilling mud acc. to NEK TS 606:2016

MEDIUM VOLTAGE

FAA L-824 TYPE B - 5 kV

FLEXIBLE EPR INSULATED CABLE

Application

Flexible single conductor 5000 volt power cables suitable for airport lighting circuits per FAA L-824 Type B. Installation in conduit, duct, aerial and direct burial applications. Rated for use at 90°C in dry conditions. The sheath also offers additional protection from deicing fluids.

Technical data

- > Rated voltage: 5 kV
- > Tensile strength: max 5 daN
- > Bending radius: fixed 10 x D
- > Bending radius: during installation 20 x D

Temperature range

- > Max. conductor temperature: +90°C
- > Short circuit temperature: +200°C
- > Lowest temp. at installation: -25°C

Rating & Approval

- > FAA L-824, AC N°150 150/5345 Type B (AWG type listed in AC N°150/5345-53 Appendix 3.)

Construction

Conductor:

- > Stranded copper wires
- > Acc. to IEC 60228 class 5.
- > AWG type class C - softly drawn acc. to ASTM B3 & B8

Insulation:

- > EPR rubber compound
- > Acc. to ICEA S-96-659 / NEMA WC71
- > Black or white

Outer sheath CPE version:

- > CPE - chlorinated polyethylene compound
- > Acc. to ICEA S-96-659 / NEMA WC71
- > Thickness 2,29 mm
- > Black or white

Outer sheath NEO version:

SLIP-ON SEPARABLE CONNECTOR

INTEGRO CONNECTOR KIT - 5 kV

FAA L-823, STYLE 3 & 10 FOR UNSCREENED CABLES

Application

Integro Primary Connector Kit is used to install isolation transformers into series circuits, and to make serviceable splice connections or test points in L-824 Airport Lighting Cable on primary power circuits.

Integro Primary Connector Kit is molded in thermoplastic rubber for superior dielectric strength, and to ensure watertight connections in the field. Each molded kit housing is filled with insulating silicone to fill voids.

Extended Strain and bend relief prevents the back end of connector from opening and allowing water to enter.

Integrally molded O-rings (3 of them) sweep debris from the cable jacket and grab hold to provide added sealing thereby completely eliminating water entry to the connection.

Technical data

- > Rated voltage: 5 kV
- > Continuous voltage rating: max. 25 A

Standard & Directive

- > Watertight
- > FAA L-823 - style 3 & 10

CAST RESIN JOINT

CAST RESIN JOINT - 6 kV

WATERTIGHT & TOOL FREE

Application

Pre-fabricated and watertight joint for airfield lighting circuits. For on-site assembly and pouring resin for connecting to the primary of the isolating transformer.

Suitable for single core cables with copper tape or wire screen. Applicable for indoor and outdoor installation either vertical or horizontal positioned in concrete manhole or directly buried in the ground. Connector can be energized immediately after plug-in and polymerisation of resin. Supplied as a kit with all necessary components.

Technical data

Voltage:

- > Rated voltage: 6 kV
- > Continuous voltage rating: max. 25 A

Temperature range

- > Max. operations temperature: +65°C
- > Lowest operations temperature: -55°C
- > Installation: From +5°C to +40°C
- > Storage from +5°C to 40°C

Standard & Directive

- > Watertight acc. to AD7

LOW VOLTAGE

DRAKAFLEX H07RN-F 450/750 V

FLAME RETARDANT + OIL RESISTANT

Application

For flexible or fixed installation in dry, humid or moist rooms and outdoor application with exposure to medium mechanical stress. If in the presence of explosive or flammable atmospheres adhere to EN 60079. The cable is not suitable for permanent immersion in water.

Technical data

Rated voltage:

- > 450/750 V
- > AC max. operating: 0,476/0,825 kV
- > DC max. operating: 0,619/1,38 kV

Test voltage:

- > 2.500 V

Bending radius:

- > Acc. to DIN VDE 0298-300

Tensile strength:

- > Max.15 N/mm²

Temperature area

- > Max. conductor temperature: +60°C
- > Short-circuit temperature: +250°C
- > Lowest temp. fixed installation: -40°C
- > Lowest temp. flexible installation: -25°C

Standard

SLIP-ON CONNECTOR

INTEGRO CONNECTOR KIT - 600V

FAA L-823, STYLE 5 & 12 - TWO POLE SEPARABLE

Application

Integro Secondary Connector Kit IS used to make serviceable in field splice connections on two conductor cable in secondary lighting circuits. They can be used to assemble a secondary extension, terminate a fixture lead, or connect a transformer secondary lead.

Both male and female connectors are molded in thermoplastic rubber for superior dielectric strength and to ensure watertightness.

Each kit comes with a molded male or female connector and connector housing, as well as an instruction sheet and grease packet for easy installation.

Technical data

- > Rated voltage: 0,6 V
- > Continuous voltage rating: max. 20 A

Standard & Directive

- > FAA L-823 - style 5 & 12

3. Airfield transformer

FIELD TRANSFORMER

INTEGRO ISOLATION TRANSFORMER

FAA APPROVED L-830 SERIE - 60 Hz

Integro

Application

Integro FAA approved serie of isolation transformers used to isolate high operating voltages for constant current airfield lights in a series circuit. They are encapsulated and designed to operate efficiently while submerged in water. They are approved to operate between $+65^{\circ}\text{C}$ and 55°C and can be installed above ground in metal cans or directly buried.

Installation area

Applicable for installation at most airports in the United States and Mexico, as well international countries in South America, Europe, Asia and Africa.

Approval & Testing

Designed for FAA L-830 specification and certified by Intertek Testing Labs to FAA Advisory Circular 150/5345-47. Undergoen 100% quality testing which includes visual inspection, heat testing and HIPOT testing after heating and 12 hour soaking.

Construction

The insolation transformers are wound for 6.6 and 20 Amp primary circuit applications. They are encapsulated in thermoplastic rubber for superior durability and dielectric strength and are manufactured with 2 primary and 1 secondary FAA L-823 listed leads.

Leads

Style 2

Male Primary Lead on 8/1 cable, 24" long (Rated 25 Amps and 5,000 Volts)

Style 9

Female Primary Lead on 8/1 cable, 24" long (Rated 25 Amps and 5,000 Volts)

Style 8

Female Secondary Lead on 12/2 TPV cable, 48" long (Rated 20 Amps and 600 Volts)

Content is subject to changes acc. to current product development and or any changes to standards.

FIELD TRANSFORMER

INTEGRO ISOLATION TRANSFORMER

FAA APPROVED L-831 SERIE - 50 Hz

Application

Integro FAA approved serie of isolation transformers used to isolate high operating voltages for constant current airfield lights in a series circuit. They are encapsulated and designed to operate efficiently while submerged in water. They are approved to operate between +65°C and 55°C and can be installed above ground in metal cans or directly buried.

Installation area

Applicable for installation at most airports in the United States and Mexico, as well international countries in South America, Europe, Asia and Africa.

Approval & Testing

Designed for FAA L-831 specification and certified by Intertek Testing Labs to FAA Advisory Circular 150/5345-47. Undergoen 100% quality testing which includes visual inspection, heat testing and HIPOT testing after heating and 12 hour soaking.

Construction

The insolation transformers are wound for 6.6 and 20 Amp primary circuit applications. They are encapsulated in thermoplastic rubber for superior durability and dielectric strength and are manufactured with 2 primary and 1 secondary FAA L-823 listed leads.

3. Airfield transformer

FIELD TRANSFORMER

INTEGRO ISOLATION TRANSFORMER

ICAO STYLE EARTHED - 50 Hz OR 60 Hz

Integro

Application

Integro FAA approved isolation transformers used to isolate high operating voltages for constant current airfield lights in a series circuit. They are encapsulated and designed to operate efficiently while submerged in water. They are approved to operate between -55 C and +65 C and can be installed above ground, in metal cans or direct buried.

Approval & Testing

Tested in accordance with the FAA L-830 (60Hz) and L-831 (50Hz) specifications per FAA Advisory Circular 150/5345-47. Also undergone 100% Quality Testing which includes visual inspection, heat testing and HIPOT testing.

Construction

The ICAO style earthed isolation transformers are equipped with an earthed stud for grounding in the field. Although earthed transformers are not listed under FAA guidelines. Manufactured in accordance with L-830 (60Hz) or L-831 (50Hz) specifications.

Leads

Style 2

Male Primary Lead on 8/1 cable, 24" long

TEMPORARY POWER DISTRIBUTION

QWPK 450/750 V

HEAVY DUTY PUR SHEATH

Application

Flexible, halogen free and oil resistant rubber cable for heavy-duty applications, where cables have to endure abrasion and dragging across rough or sharp surfaces.

Also excellent resistance to heavy mechanical stress, cold weather and ozone.

Technical data

Rated voltage:

- > 450/750 V

Test voltage:

- > 2.500 V

Bending radius:

- > 6 x D

Tensile strength:

- > Max.15 N/mm²

Temperature area

- > Operating temp: From -40°C to +75°C
- > Max. conductor temperature: +90°C
- > Short-circuit temperature: +250°C
- > Lowest temp. at installation: -40°C

Standard & Approval

Standard:

- > EN 50525

Approval:

- > <HAR>

Construction

Conductor:

- > Round and tinned
- > Multi-stranded copper wires
- > Acc. to IEC 60228 class 5.

Insulation:

- > Vulcanized rubber compound
- > EPR

Insulation colour:

- > 2-core: blue, brown
- > 3-core: blue, brown, green/yellow
- > 4-core: blue, brown, grey, green/yellow
- > 5-core: blue, brown, grey, blue, g/y

Inner sheath:

- > EPR
- > White or yellow

Outer sheath:

- > PUR, ribbed
- > Yellow

Material property

- > Halogen-free: Acc. to IEC 60754-1 & 2
- > Oil resistant: Acc. to EN 60811-404

Content is subject to changes acc. to current product development and or any changes to standards.

AIRCRAFT GROUND POWER

RU 0,6/1 kV CL5 UNIT CABLE

OIL & MUD RESISTANT SHEATH

Application

Flexible cable for the 28 VDC ground power unit. Suitable for exposure to drilling or cleaning fluids, as fulfills the OIL & MUD resistance requirement acc. to NEK TS 606:2009.

Technical data

Voltage:

- > Rated voltage: 0,6/1 (1,2) kV
- > Test voltage: 3.500 V AC

Bending radius:

- > Fixed installation: Min. 8 x D
- > Flexible installation: Min. 6 x D

Tensile strength:

- > Max. 50 N/mm²

Temperature area

- > Max. conductor temperature: +90°C
- > Short-circuit temperature: +250°C
- > Installation temperature min. -20°C

Standard

- > IEC 60092-353

Construction

Design:

- > 2 x 120 core + 2 x 1,5 signal cable

Conductor:

- > Tinned annealed copper wires
- > Acc. to IEC 60228 class 5. - flexible

Insulation:

- > EPR rubber
- > Acc. to IEC 60092-360
- > Core colours: Blue, brown

Lay up in interstices:

- > RU signal cable 2 x 1,5 mm²
- > 11 mm diameter filler
- > PET tape over

Outer sheath:

- > EVA compound compound, SHF2
- > Acc. to IEC 60092-360
- > Flame retardant & halogen free
- > Oil & MUD resistant NEK TS 606:2016
- > Weather resistant
- > Black

Material property

- > Flame retardant: IEC 60332-1-2 & -3-22
- > Halogen-free: IEC 60754-1 & 2
- > Low smoke: IEC 61034-1 & 2
- > UV resistant: Yes

Content is subject to changes acc. to current product development and or any changes to standards.

5. Aircraft ground power

AIRCRAFT GROUND POWER

400 Hz PRYFLEX AV8R - 1 kV

STATIC APPLICATION - 1 + 6 CORE

Application

Suitable for static applications under normal environmental conditions and for average mechanical stress. The installation is in cable trays, for cable clamps and for wall and ceiling fixations. Typical applications are in hangars, finger docks, service-ducts as well as other indoor installations for civil and military applications. Cable is halogen free and UV resistant.

AIRCRAFT GROUND POWER

400 Hz PRYFLEX AV8R - 1 kV

MOBILE APPLICATION - TRIPLEX

Application

Suitable for use in mobile and stationary applications under extreme operational conditions of mechanical stress and climate - indoors and outdoors. Typical applications are for example in underground pits, mobile 400 Hz diesel generator units, suspended cables for passenger bridges etc. for civil and military applications. The cable is reinforced with high strength fibers and abrasion, oil and UV-resistant as well as flame retardant.

Technical data

Voltage:

- > Rated voltage: 0,6/ 1 kV
- > Test voltage: 3.500 V AC

Bending radius:

- > Fixed installation: Min. 3 x D
- > Flexible installation: Min. 4 x D

Tensile strength:

- > Max.15 N/mm²

Temperature area

- > Max. conductor temperature: +90°C
- > Short-circuit temperature: +250°C

Standard

- > IEC 60502-1

Material property

- > Flame retardant: IEC 60332-1
- > Halogen-free: IEC 60754-1
- > Oil resistant: IEC 60811-2-1
- > UV resistant: Yes

Construction

Design:

- > Triplex core

Phase core conductor:

- > Multi-stranded tinned copper conductor
- > Acc. to IEC 60228 class 5.
- > ERP insulation
- > Black with white numbering

Neural core:

- > Multi-stranded tinned copper conductor

AIRCRAFT GROUND POWER

CABLE CONNECTING ASSEMBLY

400 HZ MOULDED GROUND POWER CABLE ASSEMBLY

Application

400 Hz single jacket aviation cable with Integro molded plugs. The assembly is intended for use in aircraft to ground terminal applications.

The systems are supplied with standard length of 28 meter of 400 Hz single jacket aviation cable and quick and easy field replacable assembly components. Other lengths available upon request.

Special nose options (moulded or hard) extend the life time of moulded cables and protect against in-field wear and tear.

See cable details on the previous page.

Moulded nose

- > Molded in abrasion-resistant neoprene
- > Extends lifetime of molded cable plug
- > Field replaceable in minutes
- > E and F signal contact markings on side
- > Insertion marker for fully mated plug
- > Custom colors available

Hard nose

- > Include all benefits from moulded nose
- > Replaceable tip on nose
- > Highly density polymer
- > Abrasion resistant
- > Low coefficient of friction
- > Extended life time for molded nose
- > Reduces replacement costs
- > Field replacable in less than 60 seconds

Nose design

- > Spring design
- > Silver-plated copper
- > Maximum electrical conductivity
- > Double contacts points
- > Spring-loaded current bridges
- > Reduced overall contact resistance
- > Superior contact wiping
- > Rigid cylindrical receptacle
- > No damage from wear, tear or bending
- > No damage from heavy impacts

Moulded plug design

- > Abrasion resistant neoprene
- > Tapered interference seals
- > Watertight connection with nose
- > Molded grip rings for easy handling
- > Wear ribs for extend life time
- > Extended strain relief
- > Marker for ease in mating nose & body

MNA001

EMERGENCY STOP SYSTEMS

PRESSLINE

PRESSURE SENSITIVE CABLE SYSTEM

Application

Pressline offers emergency stop activation over a continuous length that can include complex and convoluted routing. Traditional emergency stop buttons can leave staff with significant distances to travel before they can activate an emergency stop.

Pressline is a solid state system with no mechanical contacts. Most devices utilise mechanical contact that can fail, especially in industrial environments, leading to nuisance tripping and the need for regular inspections and maintenance. Unnecessary production stoppages are extremely costly, but can be eliminated with Pressline.

Pressline is an extremely cost effective solution. Installing Pressline around large industrial hazards can significantly reduce installation costs compared to traditional emergency stop systems.

Features & benefits

- > Continuous emergency stop switching along routes up to 10 km
- > Actuating cable can follow any route, regardless of its complexity
- > Solid state technology eliminates the nuisance tripping often associated with contact failure on traditional system
- > Low smoke and fume, zero halogen system options
- > Immune from vibration degradation
- > Maintenance free operation
- > Self-monitoring, fail safe system design
- > Quick and cost effective installation

Application area

- > Bottling plants
- > Assembly lines
- > Paper mills
- > Hi-tec manufacturing environments
- > Sorting and distribution centres
- > Quarries and mines

Specifications & approvals

- > Machinery Safety Directive 2006/42/EC
- > BS EN ISO 13849-1:2008
- > EMC directive 2014/30/EU, SB EN 61000-6-2 & 4

Pressure sensitive cable

The Pressline pressure sensitive cable is the primary element of the system and its vivid red outer sheath highlights its significance and presence in the industrial environment. It consists of two conducting layers held apart by a spacer thread.

When pressure is applied to the cable (whether as a result of pulling, bending or compression) the two conducting layers effectively make contact. The control unit interprets the resulting change in resistance as the actuation signal. The cable is available with 2 sheath types to enable exact installation requirements to be met.

- > Polyurethane (high abrasion resistance)
- > LSOH material (Superior reaction to fire)

Control unit

The pressline control unit employs dual micro-processing circuitry to continuously monitor the state of the pressure sensitive cable. Once the cable is actuated the control unit switches integral high specification safety relays and interfaces with machine control via output signals and volt free contacts.

LED indicators on the control unit advise the instantaneous system status. The control unit is available with different reset configurations so that the safety requirements of the installation environment can be complimented.

The unit can be operated at 240 V AC, 110 V AC or 24 V DC with selection made by insertion links. The enclosure is high impact polycarbonate with an Ingress Protection rating of IP55 and is therefore suitable for outdoor installation.

Reset

- > Push button
- > Key
- > Remote

Advantages

- > Available to all staff
- > Restricted to authorised staff
- > From remote and secure location

Termination box

Termination boxes are required at the start and finish of the Pressline cable run. For a loop system, where start and finish point of the run are the same, a single box is required. For other applications, a termination box is required at each end of the cable run.

Accessories

Installation is assisted by the use of CORNER CLEATS (to allow the cable to turn 90 degrees without tripping). END CLEATS (to secure the cable at the end of a linear run) and various cable cleats and SUPPORTS (to hold the cable throughout its route).

Transport and storage of cable drums

Even if cable and drum look very strong, there are certain rules to follow to avoid damage of the cable and an accompanying impairment of mechanical and electrical characteristics.

Transport and storage of cable drum

It is possible to store cable drums outdoors. When storage has occurred in heated rooms, a minimum 24-hour acclimatisation period must be observed before installation (possible condensation build-up in the cable!).

For outdoor storage the ground must be even and clean. Stones or bumps in the ground should be removed or smoothed out. Damage to the wound goods/cable should be avoided at all costs.

Cables should be secured against accidental rolling away. Under no circumstances should the drum flange of neighbouring cables touch any wound goods.

Cable drums should always be stored and transported standing on both flanges.

They should not be pushed along the ground standing on the flanges. It is possible that the strength of the cable drum would then no longer be guaranteed.

Observe the rolling direction. The arrow printed on the drum flange indicates the rolling direction so that the wound goods do not become loose.

Always uncoil the cable at a tangent, never over the flange, since the torsion thus resulting would damage the cable and laying would not be possible.

Cable ends

Finally it remains for us to point out the necessity of having faultless cable ends. Pressure-tight and impermeable cable ends are particularly essential for cables which are not longitudinally water-proof, as well as for cables which are insulated with paper, cellular-PE and foam-skin-PE. Carelessness in this area can lead to moisture penetration which is accompanied by a drastic deterioration in the electrical transmission rate. Power failures and expensive replacement work are the result.

Pressure-tight and impermeable cable ends can be achieved, for example, through the use of synthetic sealing resin or compressed air sealing stoppers.

Important physical characteristics

Temperature range

The temperature range of the cable is of great importance for both the user and fitter. After all the cable is meant to function equally well in cold and hot temperatures. It is particularly during the fitting process that powerful mechanical forces act on the cable. The plastic used serves as the limiting element for the possible temperature range. At overly warm temperatures the plastic becomes very soft and can change into a thermoplastic state (up to melting point), which causes irreversible changes in the cable.

At very cold temperatures, however, the material stiffens and becomes hard and inflexible. Here, too, irreparable damage can occur.

Tears in the sheath allow dampness and moisture in and impair the transmission rate. Details about the permissible temperature range during laying and use (following successful fitting) can be found in the information sheets of the cable manufacturer. Since the mechanical strain on the cable in its laid form is significantly less, the permissible temperature range is greater than the range valid for the installation period.

Bending radius

Regarding the bending radius we distinguish between multiple and single bending (shaping into the final position).

Multiple bending occurs mainly during the laying process. Cables are laid under tension around deflector rolls. The particular stress of multiple bending lies in the alternating stress on the materials, which can be stretched several times as well as compressed during the laying process.

To prevent permanent damage there are prescribed minimum bending radii of, for example, 10 x cable external diameter for multiple bending.

The stress on the material during final bending is not characterised by alternating stress. The cable is bent into form a final time and stays in this position for the duration of its use. The minimum bending radius in this case is, for example, 7.5 x cable external diameter. During final bending the cable can, therefore, be bent more tightly.

Exact minimum bending radii for specific cables can be found in the information sheets of the cable manufacturer.

Tension

During laying of the cable particular attention must be paid to the maximum possible tension. The cable is very quickly damaged by the use of too much force and must then be replaced. The maximum possible tension depends in the first place on the overall cross section and the tensile strength of the conducting materials used.

For cables with steel tape or copper wire spiral armouring it is the internal copper conductors alone which determine the maximum tension! The armouring has no influence on the maximum tension or can possibly reduce it through additional weight. For armouring with steel or steel profile wires, however, the tension is determined solely by the steel and steel profile wires.

Cable weight

The cable weight of larger cable dimensions can take weights of up to more than 10 t/km (without the reel!).

Our responsibilities

Social Responsibility

Within the social dimension of its business, the Prysmian Group recognises its commitment and responsibility towards the persons who work as part of the Organisation, as well as those who form the local communities in the territories in which the Group is active. Accordingly, consistent with its values, Prysmian constantly seeks to ensure the personal and professional satisfaction of its human resources, and to communicate with and involve local populations, in order to generate value for these important categories of stakeholder.

Environmental responsibility

The Group's commitment to safeguarding the environment and conserving natural resources is expressed not only by the intrinsic characteristics of our products, but also by how our production systems are managed. In particular, the prevention and reduction of their environmental impact is achieved, for example, by the efficient use of natural resources, the optimisation of logistics flows and the responsible management of waste.

During 2015, HSE further consolidated its activities at various levels within the Group (corporate, country or geographical area, business unit, production unit), centralising activities and coordinating the work of the local HSE functions. Group policies for Health, Safety and Environment, as well as the related Operating Procedures and Technical Standards, have been adopted and applied at operating unit level. The HSE function, with support from the Group audit team, periodically checks the effectiveness and proper application of the HSE rules at local level.

The aspects monitored by HSE using indicators include compliance with health and safety at work standards, energy consumption, waste management, water usage and greenhouse gas emissions. In particular, with reference to the greenhouse gas emissions, the Group has begun to collect energy consumption data in order to track both "direct" emissions (deriving from production processes) and "indirect" emissions (deriving from the energy purchased). This system of monitoring and reporting enabled the Group to participate in 2015, once again, in the Carbon Disclosure Project (CDP), which seeks to contribute to the pursuit of the objectives agreed in the Kyoto Protocol regarding the global reduction of greenhouse gas emissions

Product responsibility

Quality and innovation are the hallmarks of Prysmian's approach, both in sectors where the level of technology, the ability to innovate constantly and the commitment to offering high value-added services together establish a differentiated competitive positioning, and in those sectors where products are more standardised, such as medium and low-voltage cables. The Group applies a customer-centric approach, reflecting an ability to anticipate and satisfy the needs of customers with the maximum possible attention.
